

VOTE YES... TO PROTECT THE KEIKI

KIHEI SCHOOLS

Down wind from Monsanto Fields

1. Kihei Charter School
2. Montessori Hale O Keiki
3. Kihei Charter Middle School
4. Kihei Elementary School
5. Lokelani Intermediate School
6. Horizons Academy
7. Kamali'i Elementary

If the average wind speed in Kihei is 17 mph and we have our closet preschool .59 miles downwind from Monsanto's closest field, that leaves only 1.45 minutes for that chemical drift to reach our 2, 4 and 5 year olds. The elementary school is .85 miles downwind of Monsanto fields. This allows only 3 minutes for the chemical drift to reach our 5-11 year olds. Furthermore, this area of chemical drift also includes 6 more schools holding our intermediate and high school students and neighborhoods, housing our family and friends who are also being affected.

80 different chemicals are being sprayed and mixing in these fields daily, drifting into the air we breathe, and running into the ocean where we swim and seeping into the earth where we get our drinking water. The Environmental Protection Agency admitted in a County Council Chambers meeting this July that they do NOT require any testing and have no knowledge of the dangers of these chemicals combining.

Many of these chemicals are known to cause birth defects and cancer which we are seeing much more of here in our islands. There are reasons these chemicals are outlawed in many countries. The GMO Moratorium simply asks for Environmental and Public Health Impacts Studies (EPHIS) to prove these operations are safe.

Vote YES to TEST. It's your health. Why risk it?
