

\$8 Million spent by Monsanto & Dow

They try to control the Maui County elections, yet Maui won't be fooled.

Monsanto has a record for poisoning towns and then getting fined for cleanup. Called "Superfund Sites", Monsanto has caused 93 and Dow 96. No amount of money can bring these towns back their pristine state, nor the people that have died from contamination. Could Maui be next?

This year Monsanto agreed to pay fines of \$93 Million for poisoning the small town and people of Nitro, West Virginia.

Monsanto has sued many farms putting them out of business. Over 1,200 law suits have been settled or won - mostly for "patent infringement". This is because pollen from GMO crops contaminate Non-GMO crops and then Monsanto sues farmers for stealing their patented seeds.

The Environmental Protection Agency admitted that they do not test nor regulate any of the billions of possible chemical combinations (chemical cocktails) occurring in and around the GMO fields and or our bodies.

The Industry has spent 50 times more per voter than they've spent anywhere else in the world.

Sea turtle tumors are now directly linked to pesticide and fertilizers runoff, which creates Superweeds that are killing our reefs and poisoning our sea turtles.

Big Island now bans all new GMOs because the GMO Rainbow Papaya has contaminated over 50% of the island's non-GMO papaya.

Health complaints from workers, residents, and school children near GMO fields in Kihei has triggered a Health Dept. investigation.

Birth Defects and Cancers in Maui County are on the rise.

Who do you believe has Maui's best interest at heart?

Maui Citizens who brought forth the Initiative

OR

Mainland Chemical Company Executives

Who poisons the land, sues farmers, bribes politicians, and spent \$8 million on Ads?

No one has to loose their jobs. Both companies also grow conventional non-GMO seed crops, which are not affected by this law.

This is not a "Farming Ban". All those deceptive commercials are designed to fool you into voting against your own best interests.

This is not a pesticide law and does not restrict a local farmer's right to choose which pesticides to use.

No small farmers or backyard gardeners will be fined or go to jail. There won't be GMO police coming to your home. Really?

Any GMO plants currently in the ground can stay. This includes papaya. Any new plantings will have to be Non-GMO.

No Taxpayer money is required because those who wish to grow GMO crops must pay for all testing and administrative costs.

HC&S is not affected by this law as they are not growing GMOs.

This law is a well written and well crafted by a team of legislative, environmental and scientific lawyers.
